VBX Setup

You can set up the VBX yourself if you prefer. The steps are below. However, if you'd like us to set this up FOR you then click [Request SMS Setup](#).

1. Open Twilio account: <http://www.twilio.com/>
2. Download OpenVbx Plugins:
 - <http://github.com/chadsmith/OpenVBX-Plugin-Outbound>
 - <http://github.com/chadsmith/OpenVBX-Plugin-Subscriptions>
 - <http://github.com/chadsmith/OpenVBX-Automatic-Upgrade>
 - <http://github.com/chadsmith/OpenVBX-Plugin-Match>
3. Uncompress OpenVbx & Plugins and upload to your server using your favorite FTP program.
<http://filezilla-project.org/>
4. Create an SQL Database, DB User, and add the user to the database. All this using your hosting service control panel.
http://www.youtube.com/watch?v=9GJmybeAO_w&feature=related **NOTE:** Make sure you jot down your database name, user name & login details as you will need them in step 6 below.
5. Login to your OpenVbx installation:

`http://yourdomain.com/folder`

yourdomain.com = the domain where you uploaded openvbx in step 3 above
folder = the folder where you uploaded openvbx in step 3 above
6. Enter required information:

Hostname	=	usually 'localhost'
MySQL DB Name	=	created in step 4 above (make sure to use your cpanel username as prefix like this: cpanelusername_dbname)
MySQL Username	=	created in step 4 above (make sure to use your cpanel username as prefix like this: cpanelusername_dbusername)
MySQL Password	=	created in step 4 above
7. Connect OpenVbx to Twilio by entering your Twilio SID and Twilio Token which can be found under 'My Account' when logged in Twilio.
NOTE: Click on the small lock image located after AUTHTOKEN to make the token visible.
8. Enter the email address you want to show as From for OpenVbx notifications. You can change this later in your OpenVBX settings.
9. Enter the information that you will later use to login to your OpenVBX installation.
